

IPPG

***International Piping & Procurement
Group, LP***

Sugar Land, TX , USA

At a Glance

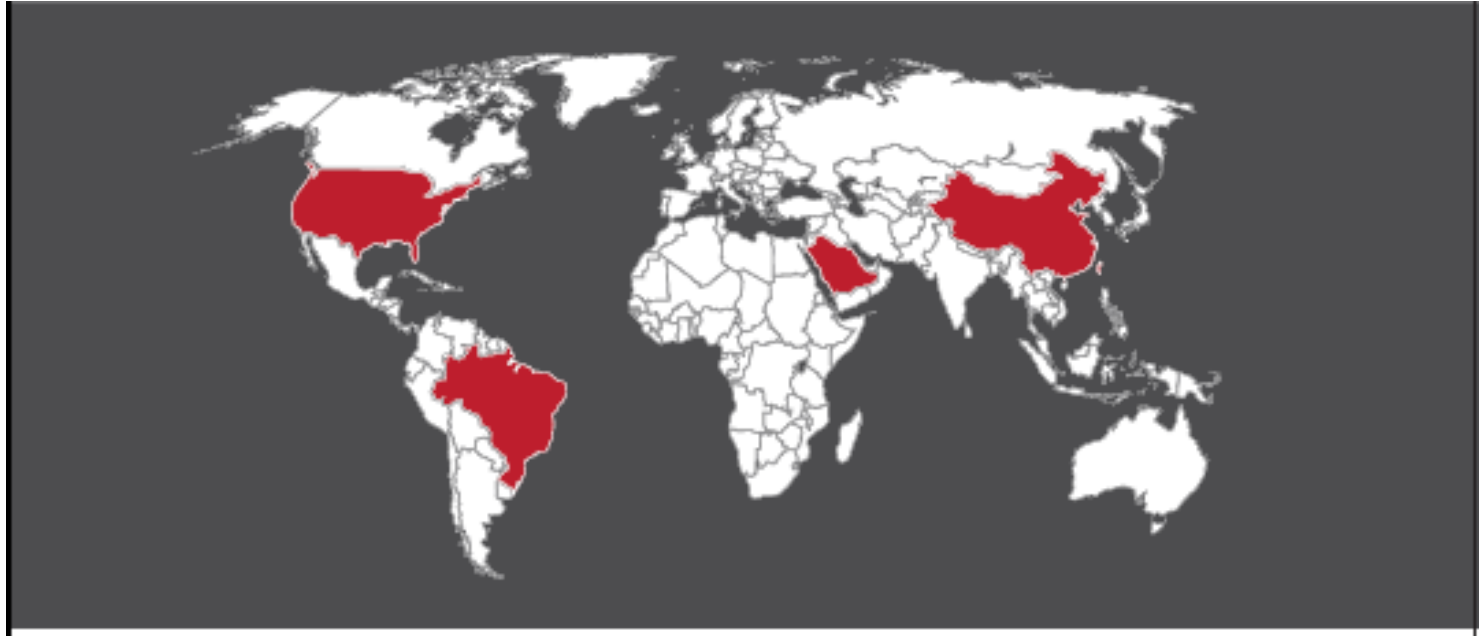

IPPG

- **IPPG is a manufacturer, packager and sourcing company with a staff of professionals contributing extensive experience in the pipe, valve and fitting industry.**
- **IPPG has supplied major projects worldwide.**
- **IPPG has sourcing commitments with key manufacturers around the globe that allow us to manage a project from any corner of the world.**
- **Some of these manufacturers are exclusive to IPPG. We supply pipe, valves, fittings, and flanges in all sizes and a full range of materials varying from carbon, alloy (including P91), stainless, and nickel alloy steel.**
- **We have the capability to provide expedited deliveries from the mill and our manufacturing facility.**

IPPG Support to Fittings Manufacturers

- IPPG supports BW Fitting manufacturers in Korea, Europe and the Domestic US Markets and is open and willing to do it for Brazilian and other Latin American Countries manufacturers
- IPPG can supply unfinished product at cheaper cost than can be produced in that respective country.
- IPPG can supply short pieces of SED pipe at vastly reduced prices.
- For example Large OD heavy wall P91 at \$1.50 Lb which would normally cost in the region of \$4.50 - \$6.00 Lb for mill run or even double that if a piece has to be specially cut from stock from distribution in the US. This is hugely successful in the Korean market.
- Another way that IPPG can help is we have agreements with different mills to sell AX pipe which can help reduce costs for companies such as YOURS. We utilize this mostly in Europe.
- Those three reasons alone should show that we can be helpful to strengthen margins for companies such as Yours!

IPPG Locations

With manufacturing facilities spanning three continents and distribution networks located all over the globe, IPPG can contribute quickly and effectively with location having minimal impact on delivery of our products. Organized in 1973 and held privately since, our international manufacturing and sourcing expertise are our greatest assets.

Cladding Services

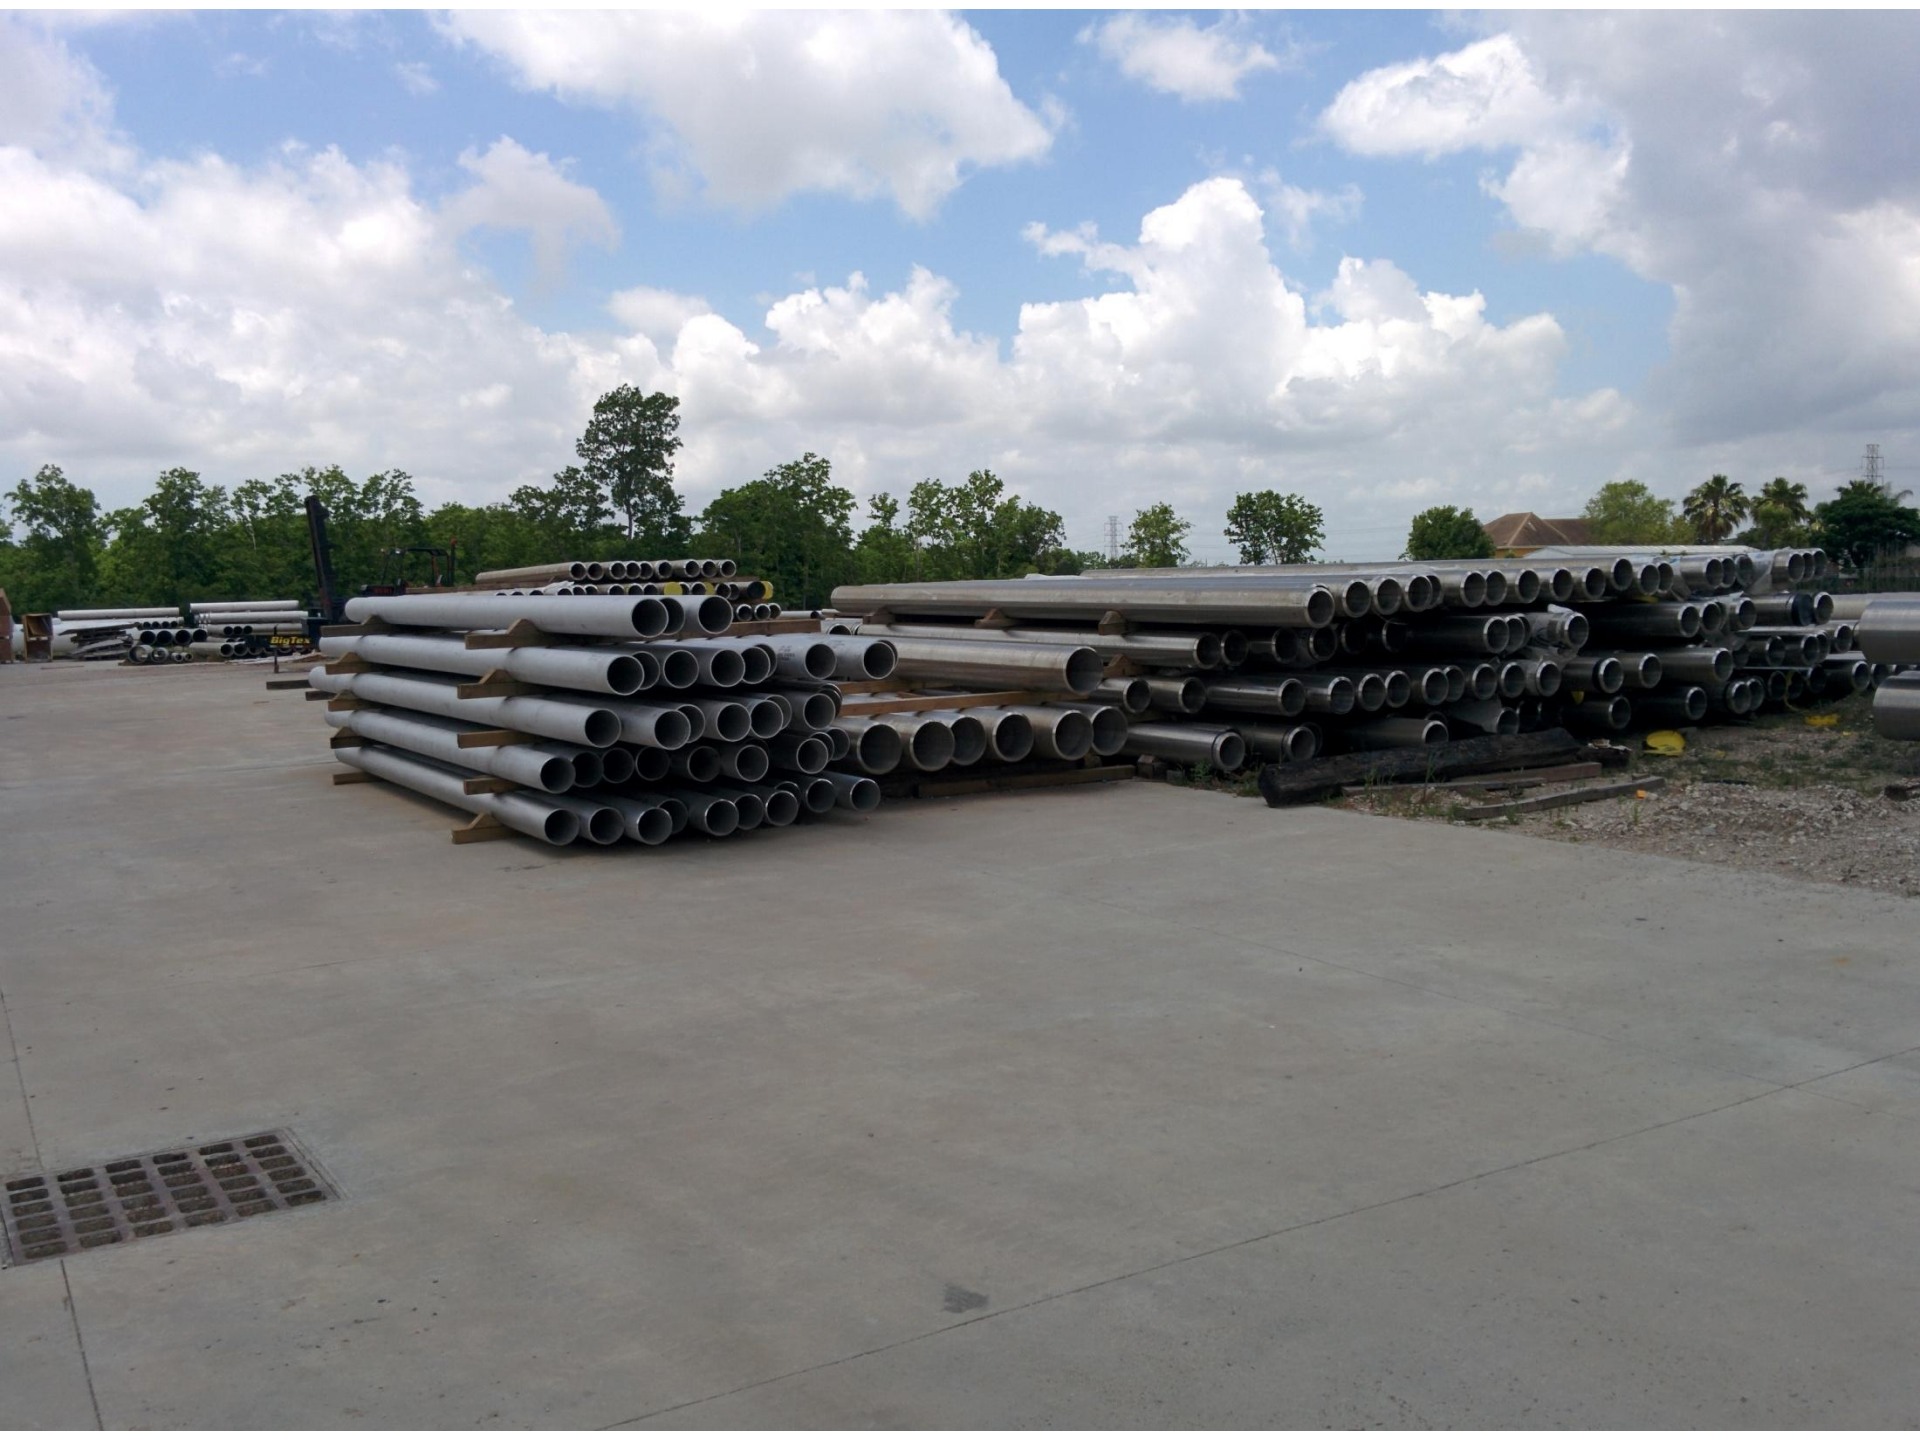

Cladding Services

- **Ready to receive your Cladding Needs!**
- IPPG USA is investing important amount of resources to be the one of the market leaders of piping services worldwide.
- IPPG acquired recently an Arc 5 Hve, which was designed and built by Arc Specialties automated manufacturing systems.
- The Arc 5 consist of a horizontal and vertical welding capabilities.
- Both the horizontal and vertical tables are rated to turn up to 5,000 lbs.
- Our machine is also capable of welding parts up to 2 ½ Ft in height and up to a 42 inch od diameter.
- The smallest ID we could do is a 5 inch at this point but all that is how we stand right now. As we come across new jobs we will purchase different set-ups.
- The process that we run is a GTAW hotwire Tig pulse arc. The purpose of a pulse arc is to keep a lower dilution rate in the weld and in return you have a smaller heat effected zone.
- ·We have approved procedures to weld on a base material of 4130 and a filler material of both 625 Inconel and 316 stainless steel.
- Our procedures have the ability to weld production parts within a 5-10% iron dilution rate.
- On this machine I am also able to program continuous runs on an intersecting bore which improves accuracy and speed.
- We hope this information is helpful and if there is any other questions we can answer for you just let us know and we would be happy to do so.
